

Finance guidance for applicants

Read our finance guidance for applicants if you are applying for a funding opportunity. It will help you complete the finance section of the application form and explains the principles you should follow when submitting research or award budgets.

This NIHR finance guidance applies to domestic, career development, and infrastructure funding. We have separate [Global Health Research finance guidance](/research-funding/application-support/guidance/global-health-research-finance-guidance-for-applicants) (/research-funding/application-support/guidance/global-health-research-finance-guidance-for-applicants).

When applying, you should submit a thorough, realistic, and accurate costing. We will look at information you submit to assess value for money.

You will need a variation to contract if you would like to request a change to the original funding value or contract length materially. Or if there is a change outside the control of the research team or researcher which you could not have reasonably foreseen. For domestic career development awards, we will only grant variations to contracts for statutory reasons.

Please read this information alongside guidance in the relevant funding opportunity. This may detail other eligibility, scope, and remit restrictions that impact your application. The information below will help you cost your application at both outline application and full application stages.

Outline applications

For an outline application you should disclose the total cost associated with your application. This should be based on the principles detailed in the pre-contracting stage. We will not request a full breakdown of costs at this stage. This total figure should not

include NHS support and excess treatment costs. You also do not need to include open access costs unless your application is related to Infrastructure funding.

Full applications

Domestic programmes and career development funding

For a full application you will be asked to disclose total costs split by cost category and year. This should be based on the principles detailed in the pre-contracting stage.

Where a full application is invited following an outline application, the funding committee will pay close attention to any material increase in costs between an outline application and a full application. You should explain any percentage changes >5% in the written section of your application.

You must provide a clear and full justification for all costs including Higher Education Institutions (HEIs), NHS and other costs. You must also ensure that you include all costs, including those required to secure [good research management](#) (/nihr-research-funding-good-practice-guide).

Pre-contracting

Following the full application funding committee meeting, successful applicants will be asked to provide a full breakdown of costs. This should be based on the cost eligibility principles outlined in the 'Costing assumptions' tab.

Recent changes

- Updated the 'Research inclusion' section to include sex and gender requirements, 10/11/2025.

Last updated:

10 November 2025

Costing assumptions

Overarching cost eligibility principles

You should follow these overarching cost eligibility principles

- Add costs to your application at current rates.
 - This should take into account any scheme-specific rates or caps.
 - Please adjust for the type of organisation incurring the cost to reflect the amount we will fund.
- The research or award costs are reimbursed; profit is not an eligible cost.
- Ensure individual items >£10k are itemised.
- Years should be calculated starting from the anticipated start date of the proposed research or award – for example, if your research or award is expected to start on 1 June 202X then its second year starts 1 June 202X+1.
- All applications must have appropriate NHS, HEI, commercial and other partner input into the finance section of the application form.
- Payments will be made to the contracting organisation only – contracting organisations will be responsible for passing on any money due to their partner organisation(s).

- Appropriate sub-contracts or collaboration agreements must be put in place for any element of the research or award which is to be paid to another organisation.
- Output VAT on sales: this should never be included in NIHR application costings.
 - Following contracting, it is up to the organisation to decide if it is appropriate to apply VAT on the invoice – if the organisation decides to apply VAT, then the Department for Health and Social Care (DHSC) will pay the invoice.
 - If your VAT registration status changes during the course of funding, promptly notify the relevant finance and programme teams.
- In England, support and excess treatment costs are funded via the [Research Delivery Network](https://rdn.nihr.ac.uk/) (<https://rdn.nihr.ac.uk/>).
 - Find further [guidance on AcoRD](/support-and-services/support-for-delivering-research/what-acord) (/support-and-services/support-for-delivering-research/what-acord) (AcoRD stands for Attributing the costs of health and social care research and development).
 - Please note, for Scotland, Wales and Northern Ireland you will need to speak to the relevant authority.

At the NIHR, we aim to ensure that the cost of research and training is properly recompensed in times of high inflation. Therefore we will fund appropriate, evidenced inflationary price increases, including pay deals. Award holders should present evidence justifying any additional inflationary costs at contract close, with any pre-close pressures managed through normal contract management.

The NIHR reserves the right to award a contract for less than the amount requested where considered appropriate.

Information on different types of organisations

Each funding opportunity will have its own specific funding rules. Please see the 'Direct and indirect funding rates' section at the bottom of this guidance for more detail on the types of organisations that are funded, and at what rate.

HEIs should determine the Full Economic Cost (FEC) of their research using the Transparent Approach to Costing (TRAC) methodology. HEI indirect costs include indirect costs and estates.

All other organisations should determine costs based on organisational cost allocation policies. Indirect costs, when eligible, should be proportional to the amount of research staff effort requested.

Direct costs

These are costs that are specific to the contracted research or award, which will be charged as the amount actually spent. They can be supported by an audit record. Eligible direct costs are listed below.

Staff costs

Include an overview of salary and associated on-costs for the applicant(s) contributing to the research or award. This includes normal salary increments broken down individually.

Please note the following when writing up your costings

- Include internal allowances for incremental increases.
- Exclude nationally agreed pay increases.
- Include names of all members of staff working on the research or award.

- Disclose full salary and on-cost detail. We will not accept applications with summarised charge-out or daily rates.
- If there are any applicant(s) whose costs are not being claimed, you should still include their details within this section, but at zero cost.
- Declare salaries that are fully or in-part funded by the NIHR, in the justification of costs section – these costs cannot be claimed.
- Include the [Apprenticeship Levy](https://www.gov.uk/guidance/pay-apprenticeship-levy) (<https://www.gov.uk/guidance/pay-apprenticeship-levy>) in the salary costs where relevant.
- Include the [Immigration Health Surcharge \(IHS\)](https://www.gov.uk/healthcare-immigration-application) (<https://www.gov.uk/healthcare-immigration-application>) for direct staff that spend 100% of their time working on research – if a staff member is working directly on more than one research project, the IHS charge can be prorated and charged accordingly to each award.
- It is important to allocate resources for team members with specific, technical skills for [knowledge mobilisation](/research-funding/application-support/plan-knowledge-mobilisation) (</research-funding/application-support/plan-knowledge-mobilisation>), such as digital expertise, experience in design-led activities, and facilitation skills.

Travel and subsistence

You will need to take travel and subsistence costs into account.

Travel

Enter the total cost of transport for all journeys by destination or purpose.

If travel is by car, apply your institution's mileage rates. Institutional rates should not exceed HM Revenue & Customs' approved mileage allowance payments. Please see the [gov.uk website for mileage and fuel rates](#)

<https://www.gov.uk/government/publications/rates-and-allowances-travel-mileage-and-fuel-allowances/travel-mileage-and-fuel-rates-and-allowances>).

All journeys by rail or air must be no higher than standard economy unless higher-class travel is required to comply with specific legislation. The NIHR does not fund first class travel.

You must consider value for money and environmental impacts. Consider whether a trip is necessary and explore cheaper options. For example, run an online video meeting or conference instead.

Subsistence

Subsistence covers accommodation and meals associated with travel. Alcoholic beverages are excluded. Daily allowances payments for subsistence are not permitted.

Conferences

Enter costs relating to attending conferences.

Conference costs should be justified in the written section of the application.

If you are applying for research programme funding, the following applies

- For research of up to 5 years, schemes will usually fund up to a maximum of 2 international conference attendances.
- This means 1 attendee to 2 international conferences, or 2 attendees to 1 international conference.
- For research beyond this, a maximum of 2 international conference attendances per 5-year period may be funded.

If you are applying for a career development funding opportunity, you should refer to guidance in the specific funding opportunity for research or award-specific rules on conference attendance and costs available.

Other

This section can be used to include any other travel and subsistence costs that do not fit into the prior categories.

If you are applying for a career development funding opportunity, you should refer to guidance in the specific funding opportunity. Certain schemes have specific rules on overseas visits.

Equipment

Include essential items of equipment specific to your research. Any costs that are not research-specific should be funded through indirect costs. HEIs that claim FEC cannot request equipment items that are included within the estates element of FEC.

Please note the following information about costings for equipment

- We will consider pieces of equipment valued up to £5,000 excluding VAT.
- Please itemise and describe purchase or lease requirements, including maintenance and related costs.
- If you are buying multiple items of the same equipment then these should be represented as one item, with the £5,000 limit applying to the entire bulk purchase.
- Items of equipment valued at £250 or more must be itemised separately - you are permitted to group the same type of equipment together.
- Computer costs are restricted to £1,000 each, including VAT and any software.

- Any proposals above this cap must be justified in the written section of the application.
 - The £5,000 bulk purchasing limit applies to computers to the extent up to 5 computers valued at £1,000 each, and can be requested in an application.
 - Pieces of equipment valued at more than £5,000 to purchase will usually need to be leased – in these cases, you must provide a ‘lease versus buy’ analysis in the written section of the application.
 - We recommend you seek appropriate internal or external VAT advice before applying – your individual circumstances may vary depending on your organisational structure and specific VAT arrangements.
 - Input VAT on purchases:
 - For any VAT that the organisation is able to recover, this should not be included in NIHR application costings.
 - Vice versa, for any VAT that the organisation is not able to recover, this may be included in NIHR application costings.
 - Ensure you follow internal procurement policies and best practice.
 - As an applicant you should get best value for money, for example by getting multiple quotations.
 - If you are requesting equipment, you should strongly justify this in the written section of your application.
-

Consumables

Consumables are non-reusable items specific to the research. These items will generally be used up or discarded during the lifecycle of the research or award. This

includes but is not limited to:

- any laboratory supplies, such as substances, compounds, specific chemicals
 - these have been bought for the individual research need
 - once used they cannot be sold or re-used in other research or awards
- consumable equipment which durable goods or specific machinery needs to operate, for example vials
- stationery such as printing of leaflets

Please itemise and describe requirements. Any costs that are not research-specific should be funded through indirect costs.

Knowledge mobilisation, dissemination and impact

You will need to account for any costs associated with sharing your research with others.

Meetings

Run meetings to mobilise knowledge from research findings with key stakeholders and knowledge users at the lowest possible cost with minimal catering.

Conferences

You are not eligible to receive any funding for the cost of hosting conferences.

Other

Detail any other large (>£10k) costs with a breakdown of constituent parts or a timescale profile of the costs. You should include any [wider knowledge mobilisation \(/research-funding/application-support/plan-knowledge-mobilisation\)](/research-funding/application-support/plan-knowledge-mobilisation) costs.

Open access

For domestic and career development funding:

If eligible, you will get an open access budget allocated to you. This is additional money on top of the funding requested. It is ring-fenced for the open access costs incurred in line with our open access policy.

For infrastructure funding opportunities and other NIHR funding streams:

All other larger awards should budget for open access costs at application stage. Funding should be managed equitably, transparently, and in line with our open access policy.

[See our open access policy \(/nihr-open-access-publication-policy\)](/nihr-open-access-publication-policy)

Training and development

These are the training and development costs incurred through career development awards. All costs in this section will be funded at up to 100%.

Please itemise and describe fully the costs associated with training and development. You should include any travel and subsistence.

Applicant tuition fees

NIHR will cover individual HEI's published PhD fees at the institution's standard UK rate for all applicants. International student rates are not funded.

Funds ear-marked for training and development activities cannot be moved to other cost categories.

Research inclusion

Include any costs related to ensuring your research is designed, recruited, delivered, and mobilised inclusively. This may be, but is not limited to, costs associated with:

- upskilling research teams with additional expertise relevant to equality, diversity and inclusion – for example, training in understanding how to work with specific groups relevant to the research, sex and gender in research, health inequalities, reasonable adjustments
- inclusive recruitment materials or strategies to attract and retain diverse participants, or those from under-served communities and places
- adjustments to research materials, protocols, methods, or events – this ensures participation and retention of diverse groups
- purchasing specialist software or services
- additional or alternative data collection – this is to ensure data collected from the relevant population is robust, or that findings can be fully applied to different populations
- additional sites or locations to carry out your research
- inclusively mobilising research findings

Clearly indicate staff costs associated with research inclusion in the ‘Staff costs’ section.

NIHR acknowledges that research delivered inclusively may take longer, and this may result in increased staff costs.

Costings for reasonable adjustments that you, or any co-applicants may require, should not be included under the research inclusion costing. Please attribute these costs under ‘Other direct costs’.

Funds ear-marked for research inclusion activities cannot be moved to other cost categories.

See our [inclusion toolkit](https://www.rsslleicesterresources.org.uk/edi-toolkit) (<https://www.rsslleicesterresources.org.uk/edi-toolkit>) and [inclusive research funding application guidance](/about-us/who-we-are/research-inclusion/funding-research-funding-application-guidance) ([/about-us/who-we-are/research-inclusion/funding-](/about-us/who-we-are/research-inclusion/funding-research-funding-application-guidance)

[application-guidance](#)) for further information.

Working with people and communities

Please itemise and describe fully the costs associated with working with diverse people and communities to shape and deliver your research. This must be in line with NIHR's requirements, which are set out in the relevant application form guidance.

When involving individuals, costs will include:

- out-of-pocket expenses
- payment in recognition of time and experience
- any relevant support, including reasonable adjustments
- training or development costs

When involving groups – for example, charities or community groups – costs may include:

- venue or catering costs for running activities or events with community members
- reasonable adjustments, for example British Sign Language interpretation for events
- a fee covering the organisational costs incurred – this can include apportioned overheads
- a donation in lieu of a fee, where agreed
- individual payments or expenses to community members in recognition of their time and experience
- training or development costs

Whether involving individuals or communities, costs may also include training or development to upskill research teams. Please read our [payments guidance for researchers and professionals](#) (/about-us/who-we-are/policies-and-guidelines/payment-guidance-researchers-and-professionals), to help you plan out the costs for effective involvement.

The cost of the patient and public involvement lead is a staff cost and should be included, as appropriate, in the 'Staff costs' section above.

See our [working with people and communities guidance](/research-funding/application-support/working-with-people-and-communities) (/research-funding/application-support/working-with-people-and-communities) for more about public and patient involvement.

Other direct costs

These are any other costs not identified elsewhere that relate directly to the research or award. For example:

- costs associated with accessing research facilities, where not covered by HEI indirect costs
- external consultancy costs
- computer software and licensing, where not standard and covered by HEI indirect costs
- books
- survey fees
- transcribing
- translation
- monitoring and evaluation activities not captured elsewhere, for example, of the public involvement, knowledge mobilisation, dissemination and impact
- recruitment relating to direct staff and not covered by HEI indirect costs
- advertising costs relating to direct staff and not covered by HEI indirect costs
- reasonable adjustments that you, or any co-applicants may require

Please note the following when including external consultancy costs:

- they must be fully justified in the written section of the application
- hourly or day rates must be specified by role
- consultants must not be employed by any applicant or collaborator institution
- they are expected to be minimal and crucial to the award's success

Please note that general recruitment, redundancy or training costs should be covered by indirect costs.

HEI indirect costs

Indirect costs should be proportional to the amount of research staff effort requested.

They include but are not exclusive to:

- general office and basic laboratory consumables
- premises costs
- library services or learning resources
- typing or secretarial or administrative
- finance, personnel, public relations and departmental services
- usage costs of major research facilities
- central and distributed computing
- charge out rates for shared equipment
- support staff in academic departments
- cost of capital employed, including redundancy costs
- general training provision, for example project management

Please see the 'Direct and indirect funding rates' section at the bottom of this guidance for further details on the types of organisations that are funded and at what rate.

HEIs should determine the FEC of their research using the TRAC methodology. HEI indirect costs include indirect costs and estates.

All other organisations should determine costs based on organisational cost allocation policies. Indirect costs should be charged in proportion to the amount of research staff effort requested.

Co-funding from other sources

Contributions from other organisations can be recorded in the 'Contributions' section. If you are considering applying for a joint funding arrangement please contact the relevant programme team.

Research support costs

Please be aware that NIHR funding does not include NHS or non-NHS support or treatment costs. In England, these are funded via the Research Delivery Network (RDN). To access this funding, you will need to complete the [online schedule of events cost attribution tool \(SoECAT\)](/support-and-services/support-for-delivering-research/online-soecat-guidance) (/support-and-services/support-for-delivering-research/online-soecat-guidance) via the [RDN's central portfolio management \(CPMS\) system](/support-and-services/support-for-delivering-research/getting-started-and-logging-cpms) (/support-and-services/support-for-delivering-research/getting-started-and-logging-cpms).

Although patient care costs associated with the research are not funded through the research contract, you still need to explain the costs in your application. This is because the funding committee will take NHS and non-NHS support and treatment costs into account when considering your research's value for money.

It is essential that you consider these costs and discuss them with the relevant NHS body or non-NHS commissioner involved. This is to avoid any delay in starting the research.

NHS support costs

These are the additional patient care costs associated with the research, which would end once the research activity stops.

If a patient care activity is primarily undertaken to facilitate research or is driven by the NHS duty of care to a patient, then it is attributed as a NHS support cost. For example, to ensure the safety of a patient participating in research.

NHS costs might cover items such as:

- processing patient records
- obtaining informed consent
- extra patient tests
- extra in-patient days
- extra nursing attention

You can get further guidance from [local Research Delivery Network AcoRD specialists](https://rdn.nihr.ac.uk/lcrn/) (<https://rdn.nihr.ac.uk/lcrn/>) and via our [AcoRD frequently asked questions](/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs) (</support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs>).

NHS excess treatment costs

These are the patient care costs that would continue to be incurred if the patient care service continued to be provided after the research activity has stopped.

If an activity is integral to the provision of a treatment, (or diagnostic) regime, then it is attributed as an NHS treatment cost. This applies whether the provision of a treatment is standard or experimental.

To identify NHS treatment costs, you must assume that the patient care service being assessed will continue even though there may be no plans for it to do so.

Where patient care is being provided which differs from the normal, standard, treatment for that condition, the difference between the total treatment costs and the costs of the 'usual standard care' (if any) constitutes excess treatment cost or saving. This is nonetheless part of the treatment cost, not an NHS support or research cost. An example of

where patient care might differ is either an experimental treatment or a service in a different location from where it would normally be given. These costs should be determined in conjunction with your NHS body or provider of NHS services and their commissioners.

Please note, you do not need to add 'Usual treatment costs' if the patient care intervention under investigation is in addition to usual care. However, you will need to justify this in the relevant 'Justification of costs' section. You must add 'Usual treatment costs' if the patient care intervention under investigation either wholly or partially replaces usual care.

You will find further guidance from [local Research Delivery Network AcoRD specialists](https://rdn.nihr.ac.uk/lcrn/) (<https://rdn.nihr.ac.uk/lcrn/>) and in our [AcoRD frequently asked questions](https://rdn.nihr.ac.uk/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs) ([/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs](https://rdn.nihr.ac.uk/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs)).

Non-NHS support costs

These are the additional costs associated with the research that would end once the research study stops – even if the associated treatment, intervention, or service continues to be provided. Social care and public health studies are eligible to receive RDN support.

For more information, see the [RDN AcoRD specialists](https://rdn.nihr.ac.uk/lcrn/) (<https://rdn.nihr.ac.uk/lcrn/>) and our [AcoRD frequently asked questions](https://rdn.nihr.ac.uk/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs) ([/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs](https://rdn.nihr.ac.uk/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs)). Please also refer to our [public health and social care researcher guidance](https://rdn.nihr.ac.uk/researcher-guidance-non-nhs-public-health-and-social-care-intervention-shortfall-costs) ([/researcher-guidance-non-nhs-public-health-and-social-care-intervention-shortfall-costs](https://rdn.nihr.ac.uk/researcher-guidance-non-nhs-public-health-and-social-care-intervention-shortfall-costs)).

Non-NHS excess treatment costs

These are the costs that would continue to be incurred if the treatment, intervention, or service in question continues to be provided after the research study stops.

The funding committee will take treatment, intervention or service costs into account when considering the value for money of your research. It is important that you consider these costs and discuss them with the NHS Trust, local authorities, third sector organisations or care or service providers involved in order to avoid any delay in starting the research.

Typically treatment, intervention and service costs should be met by the commissioner, such as the local authority.

Further guidance can be [sought from RDN AcoRD specialists](https://local.nihr.ac.uk/lcrn/) (<https://local.nihr.ac.uk/lcrn/>) and via the [AcoRD frequently asked questions](/support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs) (</support-and-services/support-for-delivering-research/what-acord/annex-b-dhsc-acord-faqs>). Please also refer to the [public health and social care researcher guidance](/researcher-guidance-non-nhs-public-health-and-social-care-intervention-shortfall-costs) (</researcher-guidance-non-nhs-public-health-and-social-care-intervention-shortfall-costs>).

Schedule of events cost attribution tool [SoECATs]

You may need to include a SoECAT in your application.

When is a SoECAT not required?

You may not need to complete the SoECAT, if there is no direct impact on participant care during the active research or award phase. This may be the case in the following circumstances:

- if overarching programmes have no specific research study protocol
- if you are applying for an infrastructure funding opportunity
- where the research or award is to be used solely for directly employing a member of staff
- when purchasing an asset
- if recruitment data is not collected for data or diagnostic reviews

If the above applies to you, you will need to explain this when justifying your costs. You should explain why you believe a SoECAT is not required for your submission.

When are multiple SoECATs required?

RDN AcoRD specialists may request multiple SoECATs in a couple of limited and rare circumstances:

- if applying to Programme Grants for Applied Research (PGfAR). Specifically where the research or award includes a number of related research studies and each study has a unique integrated research application system (IRAS) number and therefore requires a separate SoECAT
- if a single study has vastly different standards of care occurring. The local AcoRD specialist may recommend you complete several SoECATs to capture these disparities

If you are unsure whether to complete a SoECAT or multiple SoECATs, you can find guidance from [RDN AcoRD specialists](https://rdn.nihr.ac.uk/lcrn/). (<https://rdn.nihr.ac.uk/lcrn/>)

Recent changes

- Removed 'Doctoral Award' from the 'HEI direct' and 'HEI indirect' lists of awards funded at 80% under 'Career development funding', 29/04/2026

Last updated:

29 April 2026

Direct and indirect funding rates

Here is a breakdown of the rate at which NIHR programmes and schemes are funded, per funding type. Global Health Research funding is covered in our separate [Global Health](#)

[Research finance guidance \(/research-funding/application-support/guidance/global-health-research-finance-guidance-for-applicants\)](/research-funding/application-support/guidance/global-health-research-finance-guidance-for-applicants) for applicants.

Domestic programmes funding

The funding limits below apply to our [domestic programmes \(/research-funding/funding-programmes/domestic\)](/research-funding/funding-programmes/domestic).

NHS

Direct costs: funded at 100% for all

Reasonable indirect costs: 0% for all

HEI

Direct and reasonable indirect: 80% FEC for all except Policy Research Programme and Mental Health Research Groups which are funded at 100%

Commercial

Direct and reasonable indirect costs: 100% for all

Charity or non-governmental organisation

Direct and reasonable indirect costs: 100% for all

Local authority

Direct and reasonable indirect costs: 100% for all

Independent research organisation

Direct and reasonable indirect costs: 100% for all

International

Direct: 100% for all

Reasonable indirect costs: 0% for all

Career development funding

The funding limits below apply to our [Academy career development funding programmes \(/career-development/research-career-funding-programmes\)](#).

NHS

Direct costs: funded at 100% for all

Reasonable Indirect costs: 0% for all

HEI

Direct costs:

- funded at 80% for NIHR Postdoctoral Award and NIHR Research Professorships
- funded at 100% for all other awards

Indirect costs:

- funded at 80% for NIHR Postdoctoral Award and NIHR Research Professorships
- funded at 0% for all other awards

Commercial, charity or non-governmental organisation, local authority and independent research organisations

Direct: 100% for all

Reasonable indirect: 100% for all except Academy Fellowships Pre-Doc*, Pre-Application*, Insight*, Medical Schools*, and Integrated Academic Training*

International

Direct: 100% for all

Reasonable indirect: 0% for all

* For career development funding: conference-related travel and subsistence is funded at 100%. Other travel and subsistence is funded at 80% when 80% is applicable (funded through HEI)

Infrastructure and units funding

The funding limits below apply to infrastructure programmes.

NHS

Direct: funded at 100% for all

Indirect: funded at 100% for all except health protection units (HPRUs)

HEI

Direct: 100% for all

Reasonable indirect: 0% for all except Research Support Service, health protection units (HPRUs) and blood and transplant research units which are funded at 100%

Commercial

Direct and reasonable indirect costs: 100% for all

Charity or non-governmental organisation

Direct and reasonable indirect costs: 100% for all

Local authority

Direct and reasonable indirect costs: 100% for all

Independent research organisation

Direct and reasonable indirect costs: 100% for all

International

Direct: 100% for all

Reasonable indirect: 0% for all
